

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

Abstract

~~The invention relates to a~~ A roller press with a hinged frame ~~comprising~~
having a frame substructure, a frame top ~~waling wall~~ and two head pieces arranged at the
side, with at least one head piece, with a part of the frame top waling arranged on it,
forming ~~forms~~ a side flap which is arranged on the frame substructure for opening out. In the
hinged frame at least two rollers are placed, positioned adjacently, which, in a roller removal
position of the hinged frame, can be removed from the hinged frame sideways via the
removal opening formed by the opened-out side flap. The part of the frame top ~~waling wall~~
assigned to the side flap is arranged for swivelling relative to the head piece by means of an
articulated joint arranged on the associated head piece, whereby the swivel axis of the
articulated joint is arranged essentially parallel to the axes of the rollers
